Marketplace Sync for Miravia

Version 1.1.0
ecom-addons.com

Marketplace Sync for Miravia sends the products you choose from your store to the Miravia marketplace and keeps their stock and prices up to date. The connection is direct, with the keys of your own Miravia app.

Sync the catalogue and see the result of the last sync.

Requirements

Component	Version
PrestaShop	8.2 · 9.0
PHP	8.1 or later
Miravia	Seller account and an app in the Miravia Open Platform

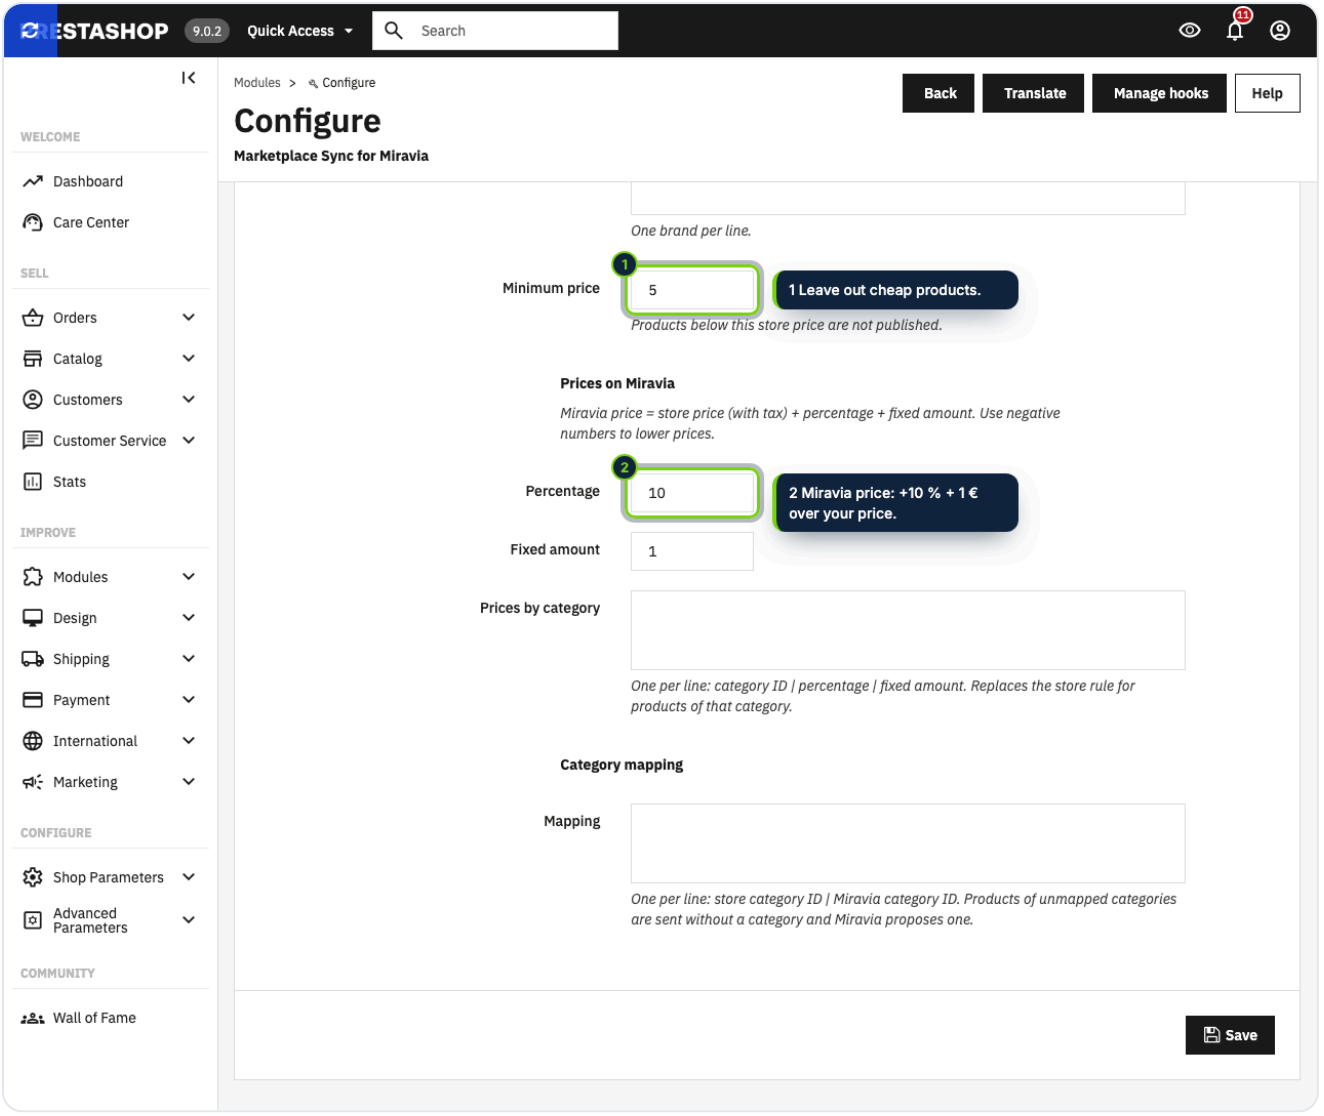

Installation

1. Download the latest version from **My account › Downloads** on ecom-addons.com.
2. In the back office, go to **Modules › Module Manager › Upload a module** and choose the zip file.

Connecting to Miravia

In the Miravia Open Platform console, create an app for your store, authorise it with your seller account and copy its **app key**, **app secret** and the seller **access token**. Paste them in **Modules › Module Manager › Marketplace Sync for Miravia › Configure**, save, and click **Test connection**. Leave the API address as it is unless Miravia gives you another one.

What is published

What is published and how prices are calculated.

Setting	What it does
Categories to publish	Only products in these categories (or their subcategories). Empty: every category.
Excluded categories	Products in these categories are never published.
Excluded brands	One brand per line.
Minimum price	Products cheaper than this in your store are not published.

Prices on Miravia

The Miravia price is your store price (with tax) plus a percentage and a fixed amount: with 10 % and 1 €, a 20 € product is published at 23 €. Under **Prices by category** you can give a category its own rule (`category ID | percentage | fixed amount`); it replaces the general one for the products of that category.

Category mapping

Link your categories to Miravia's with one line per category: `your category ID | Miravia category ID` . Products of categories without a mapping are sent without one and Miravia proposes a category.

Syncing

Sync now sends every product that passes the rules, in batches, and deactivates on Miravia the products this store published before that no longer pass them. Products that already exist on Miravia with the same reference are updated, not duplicated. When the stock or the price of a published product changes in your store, it is updated on Miravia straight away. For a daily full sync, call the cron address shown in the settings from your server (for example `0 4 * * * curl -s "<address>"`).

The settings page shows the last full sync: how many products were published and deactivated, why the rest were not sent (no reference, excluded brand…) and any error returned by Miravia.

What is sent

Miravia field	Comes from
Seller SKU	The product reference
Title and description	Name and description of the product
Images	Up to 8 product images
Price	Calculated with your price rules
Stock	Available quantity
Brand	Product brand
Category	From the category mapping, if any

Current limits

Only products without combinations are sent (combinations are planned). Brands are the product manufacturers. Importing Miravia orders, sending tracking numbers and shipping labels are planned for a later version.

Languages

The module is translated into English, Spanish and French.

Updates and support

Your licence includes every new version and 6 months of support. New versions are in **My account › Downloads**; for help, open a ticket in **My account › Support**.
