Lowest Price in 30 Days (Omnibus)

Version
1.1.0
ecom-
addons.com

Lowest Price in 30 Days (Omnibus) records every price change of your products and prints, under each discounted price, **the lowest price applied in the 30 days before the discount**. No manual upkeep: the history builds itself from the day you install it.

Under the discounted price: the lowest price of the 30 days before the discount.

Requirements

Component	Version
PrestaShop	8.2 · 9.0
PHP	8.1 or later
Theme	Classic (tested) or another theme with the standard price hooks
Cron (recommended)	A daily call to the URL shown in the configuration

Installation

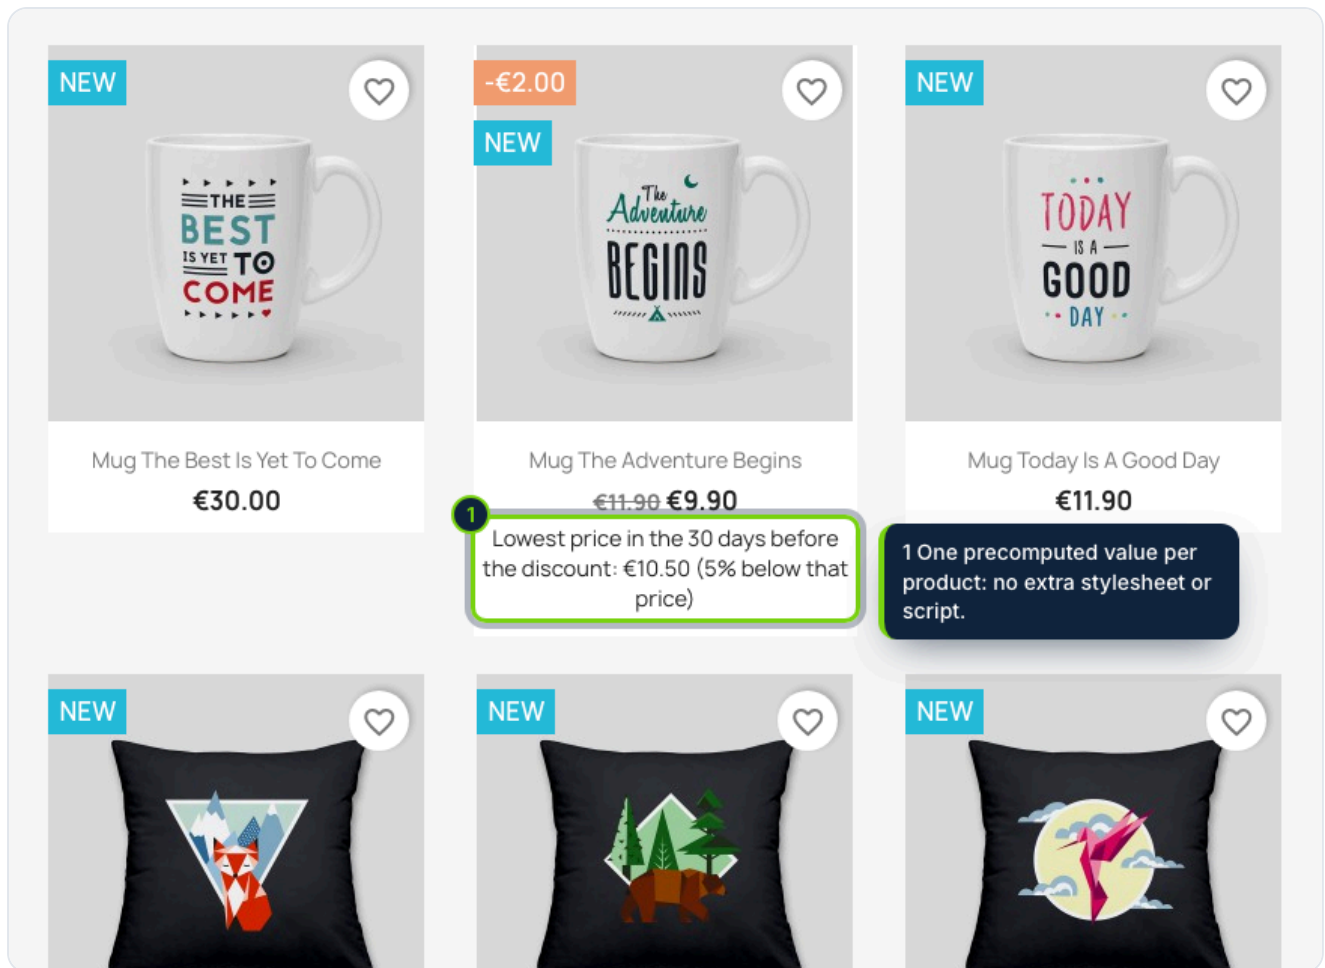

1. Download the latest version from **My account > Downloads** on ecom-addons.com.
2. In the back office, go to **Modules > Module Manager** and click **Upload a module**.
3. Choose the zip file; the module installs itself and records the current price of every product and combination.
4. Recommended: add the **cron URL** shown in the module configuration to your hosting's cron jobs, once a day.

How it works

From installation on, the addon keeps a **price history**: a new row each time the price or the regular price of a product changes. Prices are recorded per product, combination and shop when you save a product, a combination or a specific price, when a discounted product is shown, and when the daily cron URL runs (scheduled specific prices and catalog price rules start without a save).

When a product is discounted (a specific price or a catalog price rule), the addon finds when the current discount started and takes the **lowest price of the 30 days before that day**, including the price that was already in effect when that period began. The line shows it with tax or without it, as your store shows prices.

The line appears under the price on the product page (it follows the combination the customer picks) and in the product miniatures of category, search and other lists. Prices are recorded tax excluded in the default currency, as a visitor sees them; the line converts them to the customer's currency and adds the tax when your shop shows prices with tax.

Also in product lists, only for discounted products.

A few rules worth knowing:

- **The start of a promotion stays fixed** while it lasts: extending it or making it deeper does not move the reference. If your country asks to count again from each deeper discount, change it in the settings.
- **Short history.** For a product on sale less than 30 days after you installed the addon, or a new product, the lowest price known is shown. When no price was recorded before the discount at all (the product was already on sale when you installed the addon), **nothing is shown** rather than a guessed price; the price history in the back office tells you so.
- **Percentage (optional).** If you announce discounts as a percentage, the addon can show how much lower the current price is than that lowest price, as the Court of Justice of the EU requires (case C-330/23). It is only shown when the price is really below it.

Price history

In the module configuration, type a product ID, reference or name and click **Show history**: you see the lowest price customers see, when the discount started and the latest changes of every combination. **Check all prices now** records the whole catalogue at once.

Price history

7
Show history

1 Mug The adventure begins (#7)

Lowest price shown: €10.50 (discount since 10/23/2026, tax excluded).

1 The price customers see and when the discount started.

Date	Combination	Price	Regular price (tax excl.)
10/23/2026 03:03:57	—	€9.90	€11.90
10/06/2026 03:03:56	—	€11.90	€11.90
09/29/2026 03:03:56	—	€10.50	€10.50
08/14/2026 03:03:56	—	€11.90	€11.90

Prices are recorded when a product, a combination or a specific price is saved, when a discounted product is shown, and when the daily task runs. Scheduled discounts start without a save: run this URL once a day from a cron job to record them on time.

2 <http://localhost:8081/module/ecomaddonsomnibusprice/cron?token=8734d7317fb83aa9d792>

Check all prices now

2 Run it once a day so scheduled discounts are recorded on time.

The price history of any product, by ID, reference or name, and the daily task URL.

Settings

Go to **Modules > Module Manager**, find **Lowest Price in 30 Days (Omnibus)** and click **Configure**.

Lowest price before a discount

Every price change of your products is recorded. Under each discounted price the shop shows the lowest price applied in the days before the discount started. Prices changed before the module was installed are not known.

1 Days before the discount

30

Period the lowest price is kept before a discount starts.

1 At least 30 days; a longer period if your country asks for it.

Show it on

Product pages and product lists

Percentage

☒ Yes

Also show how much lower the current price is than that lowest price, in percent

2 When a discount gets deeper

Keep the lowest price from before the promotion started

A promotion whose discount is increased step by step can keep the lowest price from before the promotion started if you allow it.

2 For promotions whose discount grows step by step.

Save

Module settings: four options with sensible defaults.

Setting	What it does
Days before the discount	30 by default, at least 30. A longer period if your country or your own policy asks for it.
Show it on	Product pages and product lists, or product pages only.
Percentage	Off by default. Adds "(X% below that price)" when the current price is below the lowest price.
When a discount gets deeper	Keep the lowest price from before the promotion started (default), or count it again from each deeper discount.

About the Omnibus Directive

Directive (EU) 2019/2161 (the "Omnibus" Directive) added article 6a to Directive 98/6/EC on price indication, applicable since **28 May 2022**: any announcement of a price reduction must indicate the prior price, which is the lowest price applied during a period of **not less than 30 days** before the reduction. Member States may set other rules for perishable goods, a shorter period for products new on the market, and keep the price before the first step for reductions increased progressively.

The addon gives you the history and the line; how the rule applies to your shop (and which national options your country chose) is yours to check. This guide is not legal advice.

Data and uninstall

The addon stores prices and dates only, no personal data. The history is kept in its own table; the daily cron deletes rows older than a year, except the ones a running discount still needs. Uninstalling removes the settings and the price history.

Languages

The addon is translated into English, Spanish and French; the line under the price follows the language of the page.

Updates and support

Your licence includes every new version and 6 months of support. New versions are in **My account > Downloads**; for help, open a ticket in **My account > Support**.
