Product Packs & Multipacks

Version 1.1.0
ecom-addons.com

Product Packs & Multipacks turns products into a pack you can sell as one: you pick the products, choose how the pack is priced, and the pack page shows what is inside and what the customer saves.

The pack page: what is inside, the pack price and the saving against buying the products one by one.

Requirements

Component	Version
PrestaShop	8.2 or 9.0
PHP	8.1 or later
Theme	Classic theme tested; any theme that prints the standard `displayFooterProduct` hook

Installation

1. Download the latest version from **My account › Downloads** on ecom-addons.com.
2. In the back office, open **Modules › Module Manager**, click **Upload a module** and drop the zip.
3. Click **Configure**, then **New pack**.

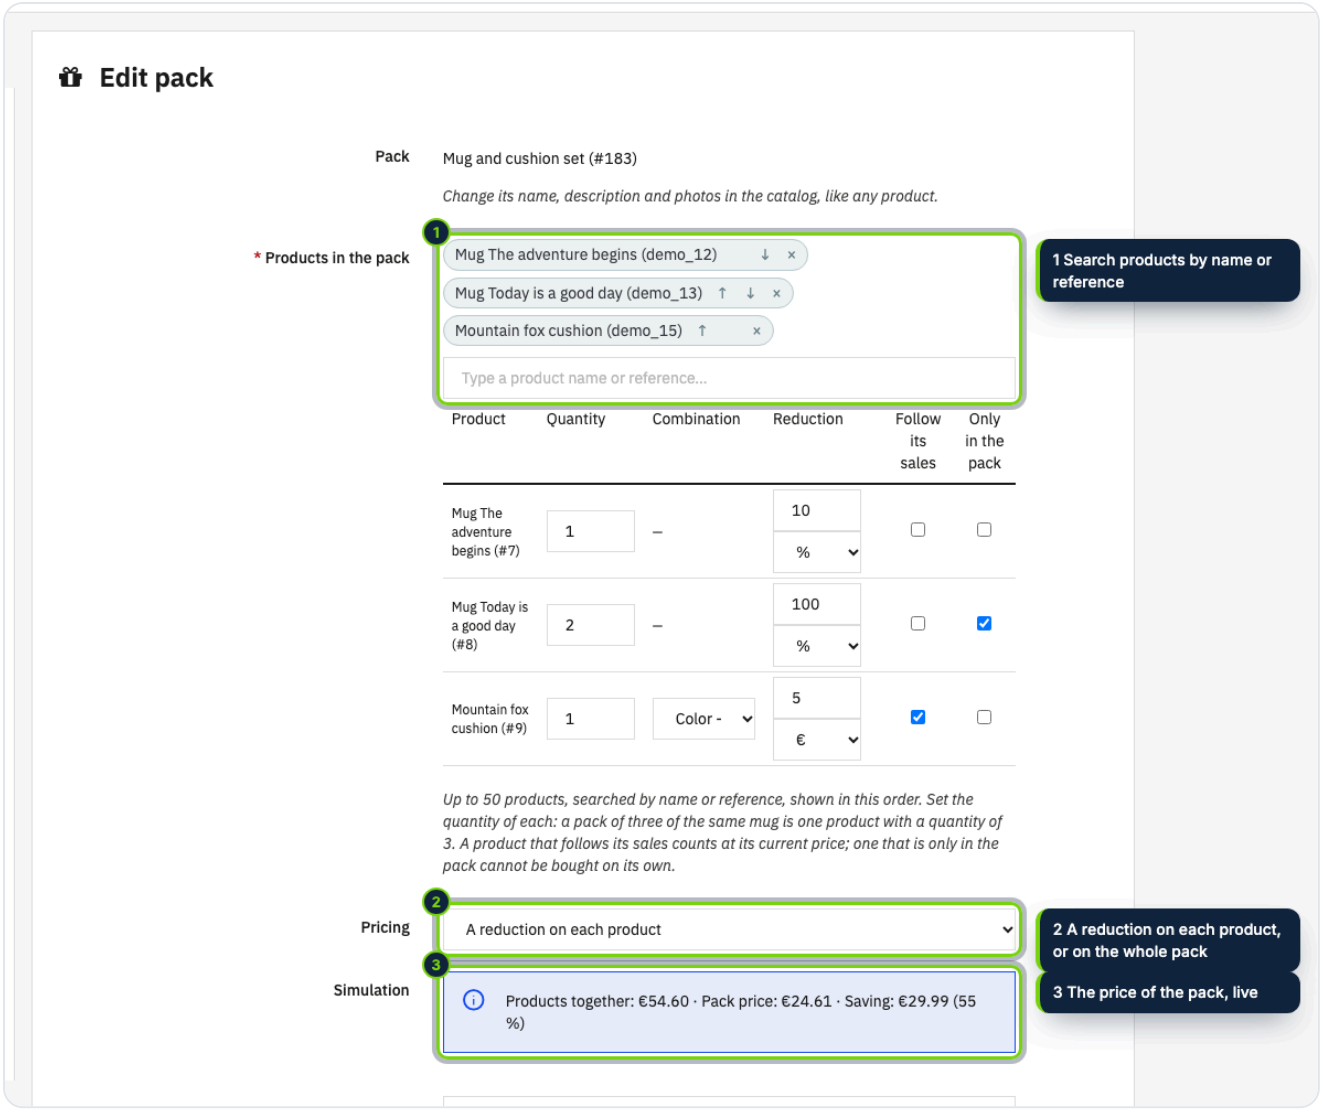

Updating from 1.0.0 keeps every pack as it is: upload the new zip over the module.

Create a pack

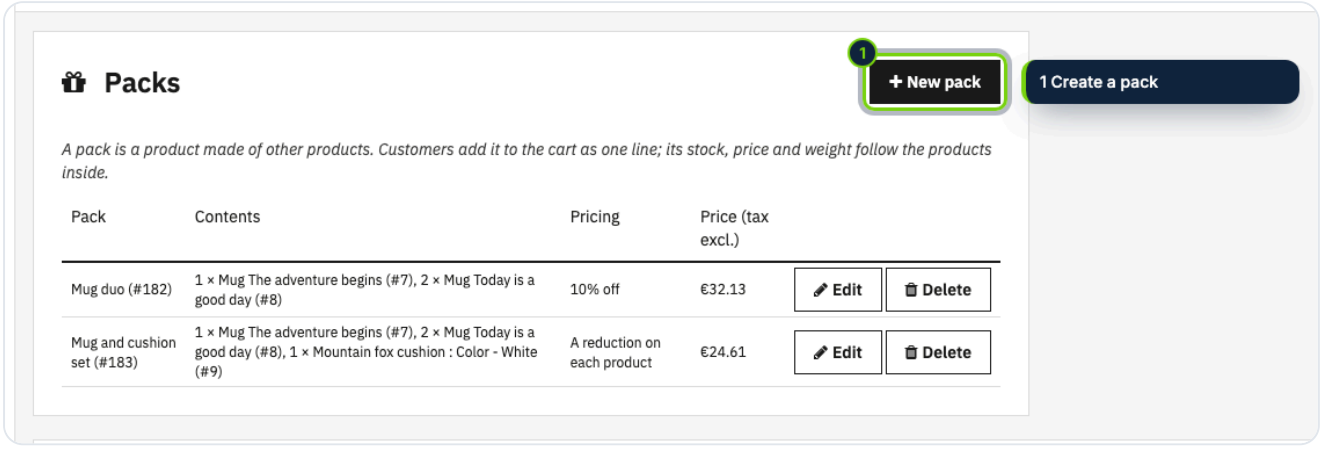

On the module page, click **New pack** and fill in:

Field	What to enter
Pack name	What customers see. You can change it, add photos and write the description in the catalog afterwards.
Products in the pack	Up to 50 products, searched by name or reference and shown in the order of the list (move them with the ↑ ↓ arrows). Each gets a row with its **quantity**, its **combination** (the default one if it has none to choose), and the two switches below.
Reduction	Only with the pricing "A reduction on each product": a percentage or an amount, tax excluded, for that product. 100 % makes it a free gift.
Follow its sales	Off: the product counts at its regular price. On: it counts at its current price, sales included.
Only in the pack	The product can no longer be ordered on its own; it is sold only inside packs.
Pricing	**Percentage off** or **amount off** the products together, a **fixed price**, or **a reduction on each product**. Amounts are in the shop currency, tax excluded.
Discount or price	The percentage (1 to 90), the amount, or the price, depending on the pricing.
Simulation	Not a field: the products together, the price of the pack and the saving, tax excluded, as you type.
Stock	**From the products in the pack** (default) or **the pack's own stock and the products' stock**.

A pack of three identical mugs is one product with a quantity of 3. A pack needs at least two units, cannot contain itself, another pack or a virtual product, must cost something (a pack made only of free gifts is refused), and an amount off cannot be as high as the products together.

A pack: products found by name and put in order, a quantity, a combination and a reduction for each, and the price of the pack as you type.

The module page lists your packs with their contents, pricing and current price.

How it works

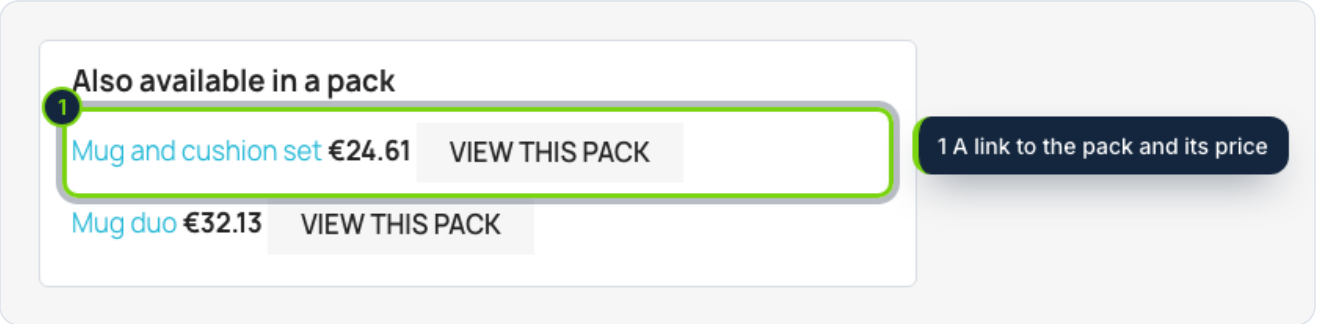

- **A native pack.** The module creates a normal catalog product of type pack and saves its contents in PrestaShop's own pack table. Cart, orders, invoices and stock movements work as for any pack. Edit its description, photos, categories and SEO in **Catalog › Products**. The pack takes the tax rule of its first product; change it in the catalog if needed.
- **One line.** The pack is one line in the cart and in the order, with one tax rate. Products with different tax rates are better sold separately.
- **Price.** It is worked out from the prices of the products, tax excluded, with the percentage, the amount, the fixed price or the reductions you chose. A product that does not follow its sales counts at its regular price.
- **Always up to date.** When you save a product, one of its combinations or a sale in the catalog, the packs that contain it are recalculated: price and weight (the sum of the weights of what is inside, quantities counted). Do not edit the price of a pack in the catalog: the next recalculation replaces it. Change its pricing on the module page instead.
- **Sales with dates.** A sale that starts or ends on a date changes nothing by itself. At the bottom of the module page, **Sales with dates** shows a URL with a secret: call it from your scheduler (for example every 15 minutes) to bring the packs up to date. It answers `OK` and the number of packs, and `403` to a wrong secret.
- **Stock.** *From the products*: the pack can be bought as many times as every product in it allows, and orders take stock from the products. *Own stock*: the pack also has its own quantity, and it needs the products in stock too.
- **Only in the pack.** The module turns "available for order" off on the product and gives its previous value back when no pack needs it any more, when the pack is removed, and when the module is uninstalled. A product you had already made unorderable stays so.
- **Removing a pack.** The product stays in the catalog, disabled, and becomes a plain product again.

Packs made in the catalog

If you already made packs with PrestaShop's own feature, the module page lists them under **Packs made in the catalog**. **Manage with this module** takes one over (or **Manage all**): it keeps its contents and its price, which becomes a fixed price, and the pack block appears on its page.

What customers see

Under the pack page, a block lists each product with its image, quantity and current price, then the pack price. A product with a reduction of its own shows its price struck through and the price in the pack, or **Free**. When the pack is cheaper than the products bought one by one at their current prices, the block also shows that total struck through and the saving; when it is not, it shows no saving. Under each product that belongs to a pack, a short list links to the packs and their prices.

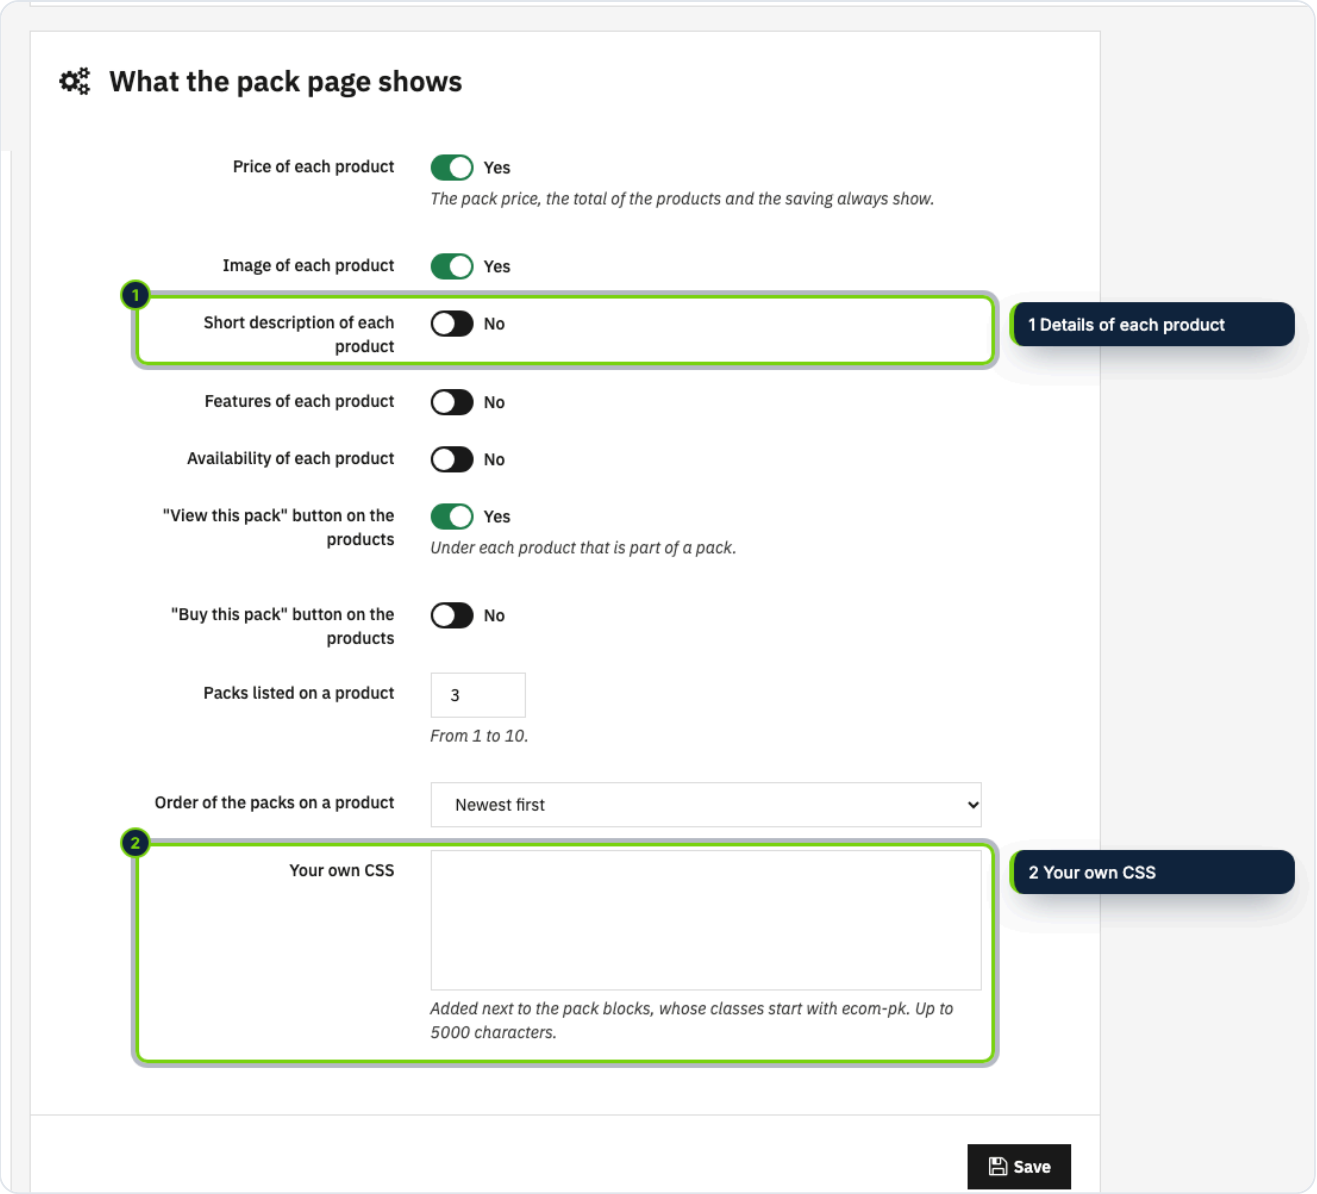

Under each product, the packs it is part of, with their price.

Settings

Under the packs, **What the pack page shows** has the display settings:

Setting	Default	What it does
Price, image of each product	Yes	The pack price, the total and the saving always show.
Short description, features, availability of each product	No	Adds them under the name of each product.
"View this pack" and "Buy this pack" buttons	View: yes, buy: no	On the products that belong to packs. "Buy" adds the pack to the cart.
Packs listed on a product	3	From 1 to 10.
Order of the packs on a product	Newest first	Or cheapest first, or random.
Your own CSS	Empty	Added next to the pack blocks; up to 5000 characters, no markup.

Choose what each product shows on the pack page and how the packs are listed on a product.

Styling

The blocks use your theme's font. Their classes start with `ecom-pk` (`.ecom-pk`, `.ecom-pk__item`, `.ecom-pk__saving`…): override them in your theme's CSS, or in the CSS setting above.

What it does not do

- A pack is one cart line with one tax rate: it does not split into one line per product, so products with different tax rates, per-product refunds and per-product order lines are not covered.
- Customers cannot change the combinations or quantities of a pack, or remove a product from it.
- Virtual products cannot be part of a pack (the file would not be delivered).

- PrestaShop 1.7 is not supported.

Data and uninstall

The module stores how each pack is priced, what is particular to each product in it and the products it made exclusive in its own tables; the contents live in PrestaShop's pack table. No personal data and no external service. Uninstalling removes the module's tables and gives exclusive products back their "available for order" value; your packs stay as normal pack products with their current price and contents.

Languages

The module is translated into English, Spanish and French; the blocks follow the language of the shop. The name and description of a pack are the product's own and are translated in the catalog.

Updates and support

Your licence includes every new version and 6 months of support. New versions are in **My account › Downloads**; for help, open a ticket in **My account › Support**.
