# Quantity Discounts with Pack Selector

Version  
1.0.0  
ecom-  
addons.com

**Quantity Discounts with Pack Selector** lets customers **buy several units of a product for less per unit**: for example 10 % off each mug from 2 mugs and 20 % off each from 3. A selector under the price of the product page shows every option with its total, and the cart charges exactly that total.

Home / Accessories / Home Accessories / Mug the adventure begins

1 Choosing an option sets the quantity to add to the cart.

### MUG THE ADVENTURE BEGINS

€11.90

Buy more, pay less per unit

|                                                  |                                         |
|--------------------------------------------------|-----------------------------------------|
| <input type="radio"/> 1 unit                     | €11.90                                  |
| <input checked="" type="radio"/> 2 units 10% off | €23.80 <b>€21.42</b><br>€10.71 per unit |
| <input type="radio"/> 3 units 20% off            | €35.70 <b>€28.56</b><br>€9.52 per unit  |

The discount is applied in the cart, also when you add units one by one.

Under the price: one option per quantity, with the total, the price per unit and the saving.

## Requirements

| Component  | Version                                                                                                         |
|------------|-----------------------------------------------------------------------------------------------------------------|
| PrestaShop | 8.2 or 9.0                                                                                                      |
| PHP        | 8.1 or later                                                                                                    |
| Theme      | Classic theme tested; any theme that keeps the standard price hook<br>( <code>displayProductPriceBlock</code> ) |

---

## Installation

1. Download the latest version from **My account > Downloads** on ecom-addons.com.
2. In the back office, open **Modules > Module Manager**, click **Upload a module** and drop the zip.
3. Click **Configure** to create your first offer.

---

## Create an offer

On the module page, click **New quantity offer** and fill in:

| Field      | What to enter                                                                                                                                            |
|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| Name       | For you only; customers do not see it.                                                                                                                   |
| Quantities | Up to 4 rows: from how many units (2 to 99) and the discount on each unit (1 to 90 %). Larger quantities need larger discounts. Leave unused rows empty. |
| Products   | Product IDs separated by commas (see <b>Catalog &gt; Products</b> ). A product can be in one offer only.                                                 |

## Edit quantity offer

\* Name

Cushions

*For you; customers do not see it.*

\* Quantities

| From (units) | Discount per unit |   |
|--------------|-------------------|---|
| 2            | 5                 | % |
| 4            | 10                | % |
| 6            | 15                | % |
|              |                   | % |

1 From 6 cushions, each one costs 15% less.

*Up to 4 quantities, from 2 to 99 units; larger quantities need larger discounts. Leave unused rows empty.*

\* Products

9, 10

*Product IDs separated by commas (see Catalog > Products). A product can be in one offer only.*

 Cancel

 Save

*An offer: a name, up to four quantities with their discount per unit, and the products.*

## What customers see

Under the price, a box titled **"Buy more, pay less per unit"** lists one unit and each quantity of the offer with the total, the regular total struck through, the price per unit and the saving. Choosing an option sets the quantity next to **Add to cart**; typing a quantity selects the matching option. All combinations of a product count together: one S and two M shirts are three shirts.

In the cart, each line gets the price of the quantity reached and says which offer applies. Removing units brings the line back to the lower tier, then to the regular price. Adding units one by one gives the same result.

## SHOPPING CART

*In the cart, the line gets the price of the quantity reached, as a native PrestaShop price.*

## How it works

The discount is a native PrestaShop **cart price**: a specific price that belongs to the customer's cart only, with "from quantity" set to each tier. The module writes it when the cart changes and again when the cart and checkout pages open. PrestaShop then computes the cart, the order and the invoice by itself, and the prices never show on the product page or in other carts. Quantities follow the **Quantity discounts based on** setting of PrestaShop (products by default) and totals follow its rounding mode, so the selector shows the totals the cart will charge.

## How offers combine with other discounts

## Quantity offers

[+ New quantity offer](#)

Each offer gives a percentage off every unit once the cart holds enough units of a product (all its combinations together). Customers pick the quantity in a selector under the price.

| Name               | Quantity → discount per unit | Products                                                                       |                      |                        |
|--------------------|------------------------------|--------------------------------------------------------------------------------|----------------------|------------------------|
| Mugs: 2 or 3 units | 2 → 10 %, 3 → 20 %           | Mug The adventure begins, Mug Today is a good day, Hummingbird printed t-shirt | <a href="#">Edit</a> | <a href="#">Delete</a> |
| Cushions           | 2 → 5 %, 4 → 10 %, 6 → 15 %  | Mountain fox cushion, Brown bear cushion                                       | <a href="#">Edit</a> | <a href="#">Delete</a> |

### **i** How offers combine with other discounts

**1**

- A product with a discount of its own (a specific price, a catalog price rule, a flash sale or quantity discounts set on the product page) keeps it: the selector is hidden and the offer is not applied. The two never stack.
- The discount is a price of the cart only: product pages, lists and the price history keep the regular price.
- Vouchers (cart rules) apply to the cart total as usual, after the quantity discount.

**1 Never stacked:** a product with its own discount keeps it.

The module page: every offer with its quantities and products, and how offers combine with other discounts.

- **Never stacked.** A product with a discount of its own — a specific price, a catalog price rule, a flash sale of our Flash Sales Countdown module or quantity discounts typed on the product page — keeps it: the selector is hidden and the offer is not applied. When that discount ends, the offer applies again the next time the cart is shown.
- **Product pages keep the regular price.** The offer is a price of the cart, so price histories and prior-price notices (our Lowest Price in 30 Days module) are not affected.
- **Vouchers** (cart rules) apply to the cart total as usual, after the quantity discount.

## Styling

The selector uses your theme's font. Override the CSS variables `--ecom-qo-accent`, `--ecom-qo-border`, `--ecom-qo-bg` and `--ecom-qo-selected-bg` of `.ecom-qo` in your theme to change its colours.

## Data and uninstall

The module stores the offers in one configuration value and the cart prices it writes in its own table; no personal data and no external service. Cart prices of ordered carts and of carts idle for 30 days are removed when an order is placed. Uninstalling removes the cart prices, the table and the offers; placed orders keep their prices.

---

## Languages

The module is translated into English, Spanish and French; the selector follows the language of the shop.
