Size Guide & Fit Finder for WooCommerce

Version 1.0.0
ecom-addons.com

Size Guide & Fit Finder adds a **size chart** to your WooCommerce product pages, right above the size choice, and a **fit finder**: the shopper types a few body measurements, gets a size (or an honest "between two sizes" / "outside this chart") and, on variable products, selects it in the variation form with **one click**. Measurements are worked out in the shopper's browser and never sent to your site.

A "Size guide" button just above the size choice of the variable product, in the block theme's add-to-cart form.

Requirements

Component	Version
WordPress	7.0 or later (tested with 7.1)
WooCommerce	11.0 or later (tested with 11.2)
PHP	8.1 or later
Theme	Block themes (Twenty Twenty-Five tested) and classic themes (Storefront tested)
Products	Variable products with a size attribute for the one-click selection; simple products show the guide only

Installation

1. Download the latest version from **My account › Downloads** on ecom-addons.com.
2. In WordPress, go to **Plugins › Add New Plugin › Upload Plugin**, choose the zip file, click **Install Now**, then **Activate**.
3. Open **Products › Size charts** and click **Add a size chart**.

Creating a chart

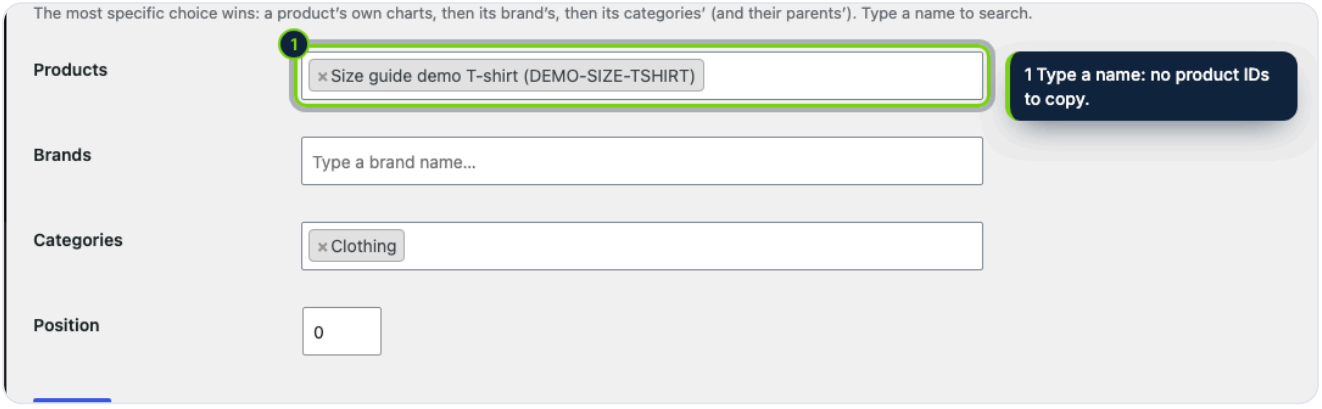

Products › Size charts: a name per language, a template to start from and the grid typed or pasted from a spreadsheet.

Field	What it does
Name shown to shoppers	One per language of the site; the site language is required. It is the table caption and, when a product has several charts, the tab name.
Active	Untick to hide the chart without deleting it.
Start from a template	**Tops** (chest, waist) and **Bottoms** (waist, hips, inside leg) fill in the usual sizes XS–XXL with empty values; **Shoes** fills EU 35–47 with foot lengths and UK, US men and US women sizes. Press **Fill the grid**; nothing is saved until you press **Save**.
Values typed in	Centimetres or inches. Shoppers can switch: values are converted and rounded to one decimal.
Sizes and measurements	The first line names the columns, then one line per size, smallest first. Separate cells with `
Note under the table	Plain text per language, such as "This brand runs small".
How-to-measure image	Optional image from the media library; it replaces our drawings.

```
Size | Chest   | Waist
S    | 86-91   | 71-76
M    | 92-97   | 77-82
L    | 98-103 | 83-88
```

If something is wrong (a value that is not a number, sizes in the wrong order, a size typed twice…), nothing is saved and the form shows what to fix with what you typed. After saving, a preview of the table appears under the form.

Which products show which chart

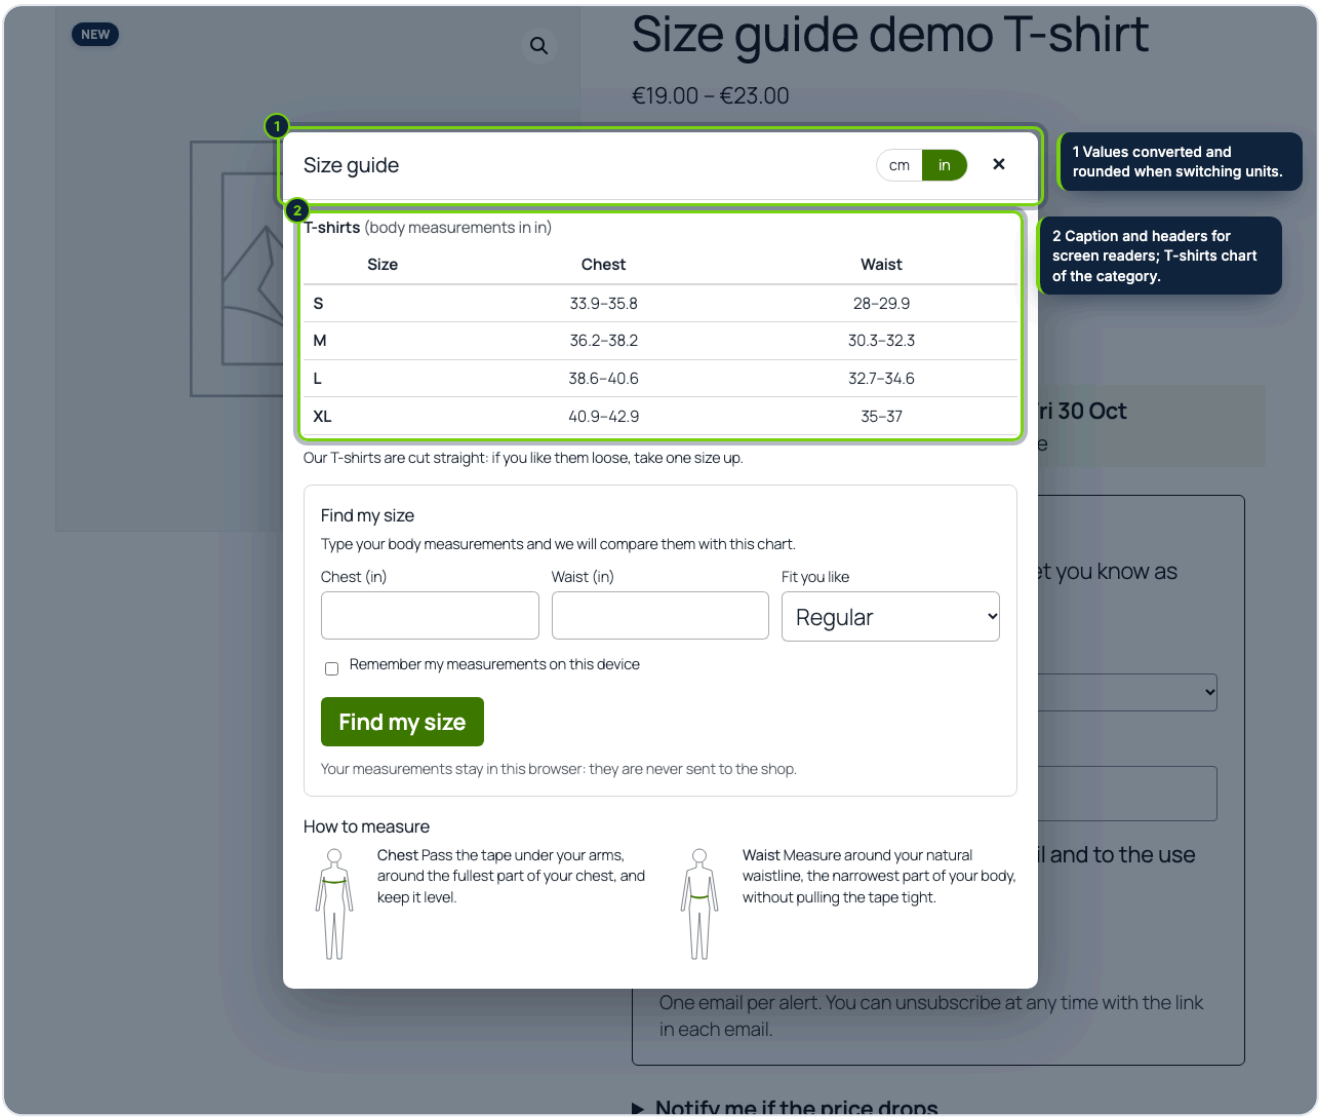

Assignment with WooCommerce's own search boxes: the product's charts win over its brand's and its categories'.

Choose **Products**, **Brands** and **Categories** by typing their name. For each product the most specific level wins:

1. charts assigned to the product itself;
2. otherwise, charts of its brand (WooCommerce **Products › Brands**);
3. otherwise, charts of its own categories;
4. otherwise, charts of their parent categories, the nearest first.

When a level has several charts (for example Women and Men), they are shown as tabs, ordered by **Position**.

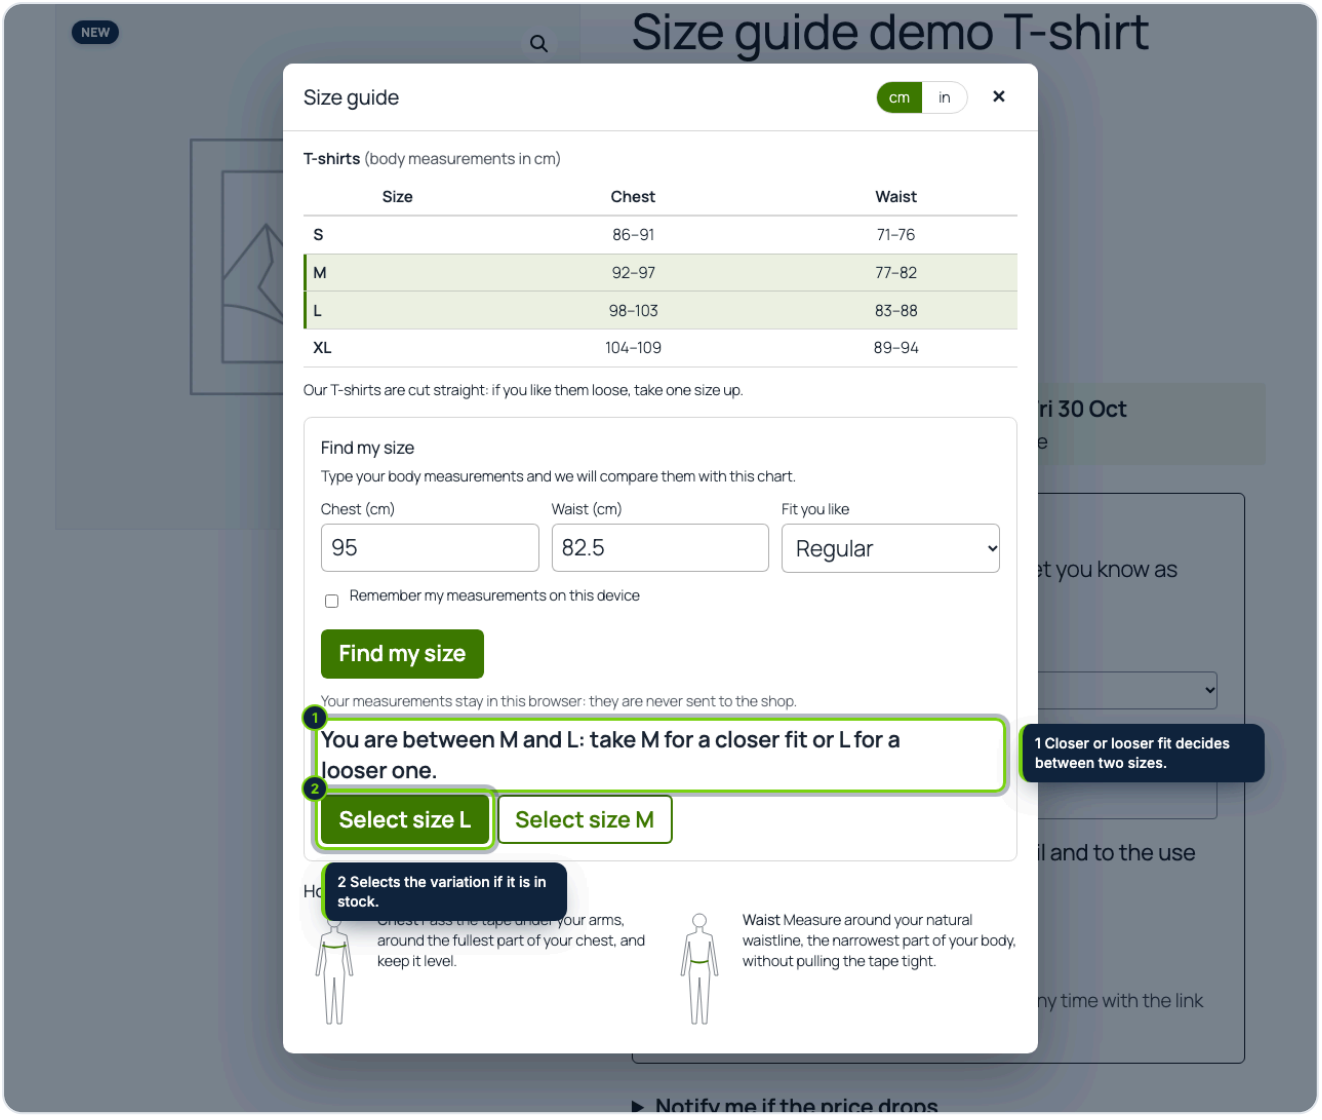

What shoppers see

The chart in an accessible dialog: real table headers, cm or inches, the merchant's note and how to measure.

- A **Size guide** button before the add-to-cart form (block themes) or in the product summary (classic themes).

- It opens a dialog with the table (caption, column and row headers, keyboard scrolling), a **cm / in** switch, your note and **How to measure** with a drawing and a sentence per measurement. **Esc**, the × button or a click outside close it, and the focus goes back to the button.

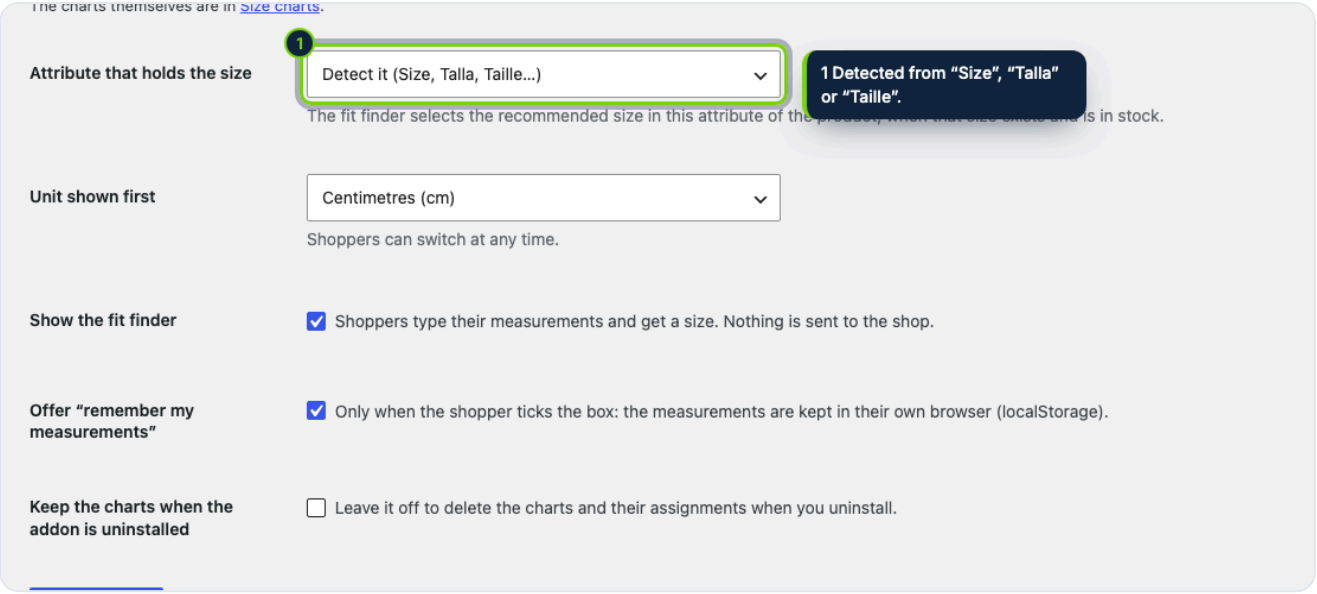

The fit finder: the shopper's measurements stay in the browser and an honest answer comes back, here "between two sizes".

How the fit finder decides

1. For each measurement typed, the sizes whose range contains it fit; if none does, the value is between the size below and the size above.
2. The measurement that needs the largest size decides, because a garment has to fit everywhere.
3. Between two sizes, **Closer to the body** takes the smaller one, **Looser** the larger one, and **Regular** shows both, larger first.
4. Below the first size or above the last, no size is suggested.

Select size M sets the size in the variation form: WooCommerce then shows that variation's price and stock and enables **Add to cart**. It only does so when a purchasable variation with that size is in stock; otherwise it says "Size XL is out of stock" or "Size XXL is not offered for this product".

Settings

WooCommerce › Settings › Products › Size guide: the size attribute, the unit shown first and the finder options.

Setting	Default	What it does
Attribute that holds the size	Detect it	Uses `pa_size` or an attribute named Size, Talla or Taille. Choose another global attribute, or **None** to show the guide without selecting.
Unit shown first	Centimetres	Shoppers can switch at any time.
Show the fit finder	On	Off shows the chart only.
Offer "remember my measurements"	On	Adds a tick box; only when the shopper ticks it are the measurements kept in their own browser (`localStorage`). Unticking removes them.
Keep the charts when the addon is uninstalled	Off	When off, deleting the plugin removes its two tables and settings.

Privacy and caching

- The measurement fields have no name and belong to no form that is sent: nothing reaches your server, logs or analytics.

- The product page HTML is the same for every visitor, so WP Rocket, LiteSpeed Cache, Varnish and other page caches can store it. Stock per size is part of the page and is refreshed when your cache is.

Styling

The block uses your theme's fonts and colours. The accent (tape, active unit, matching rows) is the CSS custom property `--ecom-sg-accent`:

```
.ecom-sg { --ecom-sg-accent: #9b2c5e; }
```

Languages

English, Spanish and French are included, for the storefront and wp-admin. Chart names and notes are typed per language.

Updates and support

Updates are free for life: download the new zip from your account and upload it over the old one in **Plugins › Add New Plugin › Upload Plugin**. Support is included for six months after purchase.
