Smart Product Badges

Version 1.1.0
ecom-addons.com

Smart Product Badges adds automatic badges to your product images: **Sale** with the real discount, **New**, **Low stock** and **Bestseller**. Once the rules are set, every product gets the right badges without editing it.

Badges on the shop page, added automatically by the rules.

Requirements

Requirement	Version
WordPress	7.0 or later
WooCommerce	11.x
PHP	8.1 or later
Themes	Block themes (e.g. Twenty Twenty-Five) and classic themes

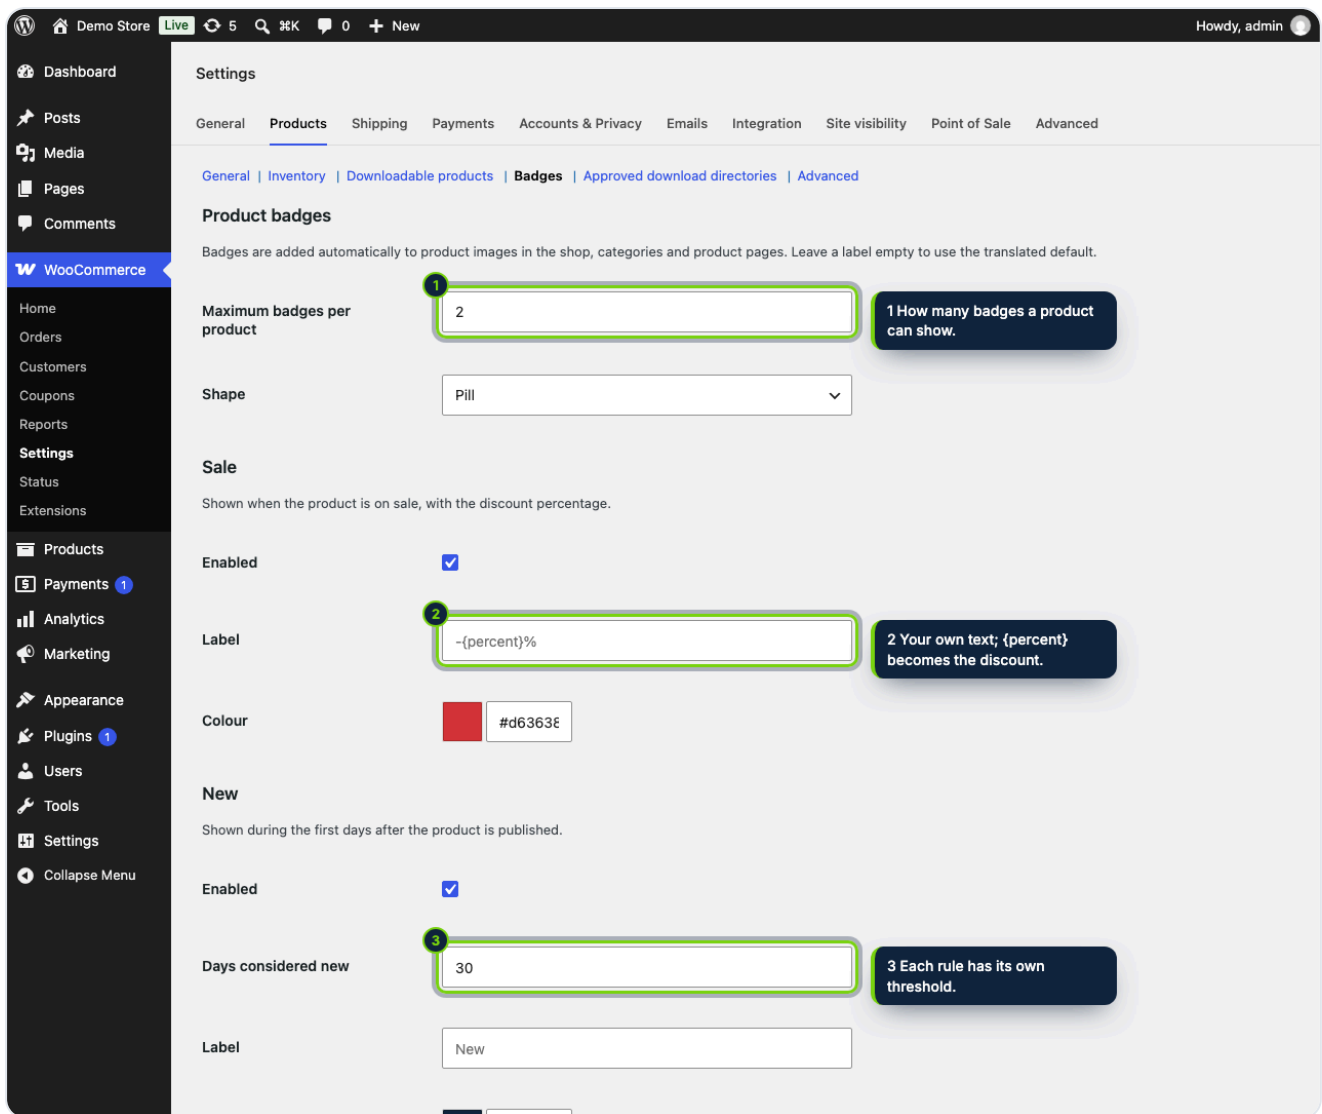

Installation

1. Download the latest version from **My account > Downloads** on ecom-addons.com.
2. In WordPress, go to **Plugins > Add New Plugin > Upload Plugin** and choose the zip file.
3. Click **Install Now** and then **Activate**.

The badges appear straight away with the default rules. There is nothing else to set up.

Configuration

Go to **WooCommerce > Settings > Products > Badges**.

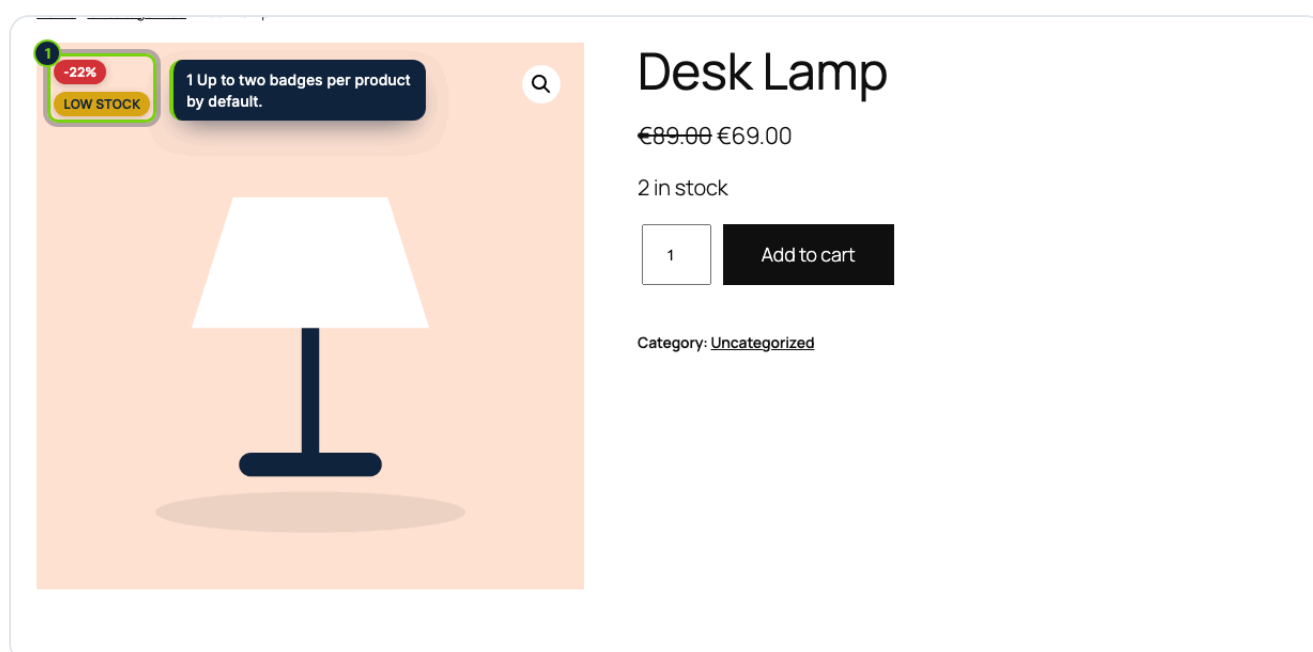

The settings page.

Setting	What it does
Maximum badges per product	How many badges a product can show at once (2 by default). They follow the order Sale, New, Low stock, Bestseller.
Shape	Pill, rounded or square.
Enabled	Turns each rule on or off.
Days considered new	A product is <i>New</i> during this many days after it is published (30).
Stock threshold	<i>Low stock</i> appears when the managed stock is at or below this number (5).
Minimum sales	<i>Bestseller</i> appears from this number of sales (50).
Label	Your own text. Leave it empty to use the translated default. In the Sale label, <code>{percent}</code> is replaced by the discount.
Colour	Background colour of the badge. The text turns white or dark automatically for contrast.

How the rules work

- **Sale** is shown when the product is on sale and the sale price is lower than the regular price. For variable products, it shows the biggest discount among the variations.
- **New** counts the days since the product was published.
- **Low stock** only applies to products with *Manage stock* enabled and still in stock.
- **Bestseller** uses WooCommerce's total sales of the product.

WooCommerce's own "Sale!" badge is hidden while the Sale rule is enabled, so you never see two sale badges.

On the product page the badges sit on the gallery.

Styling

Badges use these CSS classes, in case you want to adjust them in your theme:

- `.ecom-sb` : the container, in the top-left corner of the image.
- `.ecom-sb__badge` and `.ecom-sb__badge--sale`, `--new`, `--low_stock`, `--bestseller`.

Languages

The plugin is translated into English, Spanish and French and follows the language of your site.

Updates and support

Your licence includes every new version and 6 months of support. New versions are available in **My account > Downloads**; for help, open a ticket in **My account > Support**.
